Age:28SocietyASEBA StandardRelationship:SelfBirth Date:1989-06-13Printed by: ADMIN\adminAgency:Hmo

The Adult Self-Report for Ages 18-59 (ASR 18-59) was completed by Jose, to obtain his perception of his adaptive functioning, substance use, and problems.

On the ASR/18-59 - Adaptive Functioning Scale Scores, Jose's scores on the Friends, Family and Education syndromes were in the normal range. Jose's score on the Job syndrome was in the clinical range below the 3rd percentile. Jose's score on the Mean Adaptive scale was in the borderline clinical range (3rd to 7th percentile). Jose's score on the Personal Strengths scale was in the normal range.

The Substance Use scales were not scored.

On the ASR 18-59 problem scales, Jose's Internalizing Problems, Externalizing Problems and Total Problems scores were all in the clinical range above the 90th percentile for men aged 28. Jose's score on the Intrusive syndrome was in the normal range. Jose's scores on the Anxious / Depressed, Withdrawn, Attention Problems and Aggressive Behavior syndromes were in the borderline clinical range (93rd to 97th percentile). Jose's scores on the Somatic Complaints, Thought Problems and Rule-Breaking Behavior syndromes were in the clinical range above the 97th percentile. These results indicate that Jose reported more problems than are typically reported for men aged 28, particularly problems of Anxious / Depressed, Withdrawn, Somatic Complaints, Thought Problems, Attention Problems, Aggressive Behavior and Rule-Breaking Behavior nature. Jose's scores on the Critical Items are listed in the box below. The sum of Jose's scores on the Critical Items was in the clinical range above the 97th percentile.

On the ASR/18-59 - DSM-Oriented Scales, Jose's scores on the Anxiety Problems and AD/H Problems scales were in the normal range. Jose's scores on the Depressive Problems, Somatic Problems and Antisocial Personality scales were in the clinical range above the 97th percentile. These results indicate that the DSM should be consulted to determine whether Jose meets diagnostic critieria for Depressive Problems, Somatic Problems and Antisocial Personality. Jose's score on the Avoidant Personality Problems scale was in the borderline clinical range (93rd to 97th percentile). Jose's score in the borderline clinical range suggests that the DSM should be consulted to determine whether Jose might meet diagnostic criteria for disorders characterized by problems included on that scale. On the Attention Deficit/Hyperactivity subscales, Jose's scores on all rated scales were in the normal range.

Critical Items

In addition to the scale scores, it is important to consider scores on individual problem items. Because they may raise particular challenges for management, it is especially important to note the problems listed below that were reported with scores of 1 or 2. Look at comments made by the informant on the form in relation to these problems to obtain more information about risks associated with the problems and the contexts in which the problems occur.

Score	Problem Item	Score	Problem Item	Score	Problem Item
1	6.UsesDrugs	1	21.DestroyOther	1	90.GetsDrunk
1	8.Concentrate	1	40.HearsThings	1	91.ThinksSuicide
