The Adult Behavior Checklist for Ages 18-59 (ABCL 18-59) was completed by Dale Xylophone, Jose's informant, to obtain Dale Xylophone's perception of Jose's adaptive functioning, substance use, and problems.

On the ABCL/18-59 - Adaptive Functioning Scale Scores, Jose's score on the Spouse/Partner syndrome was in the normal range. Jose's score on the Friends syndrome was in the borderline clinical range (3rd to 7th percentile). Jose's score on the Personal Strengths scale was in the normal range.

The Substance Use scales were not scored.

On the ABCL 18-59 problem scales, Jose's Internalizing Problems, Externalizing Problems and Total Problems scores were all in the clinical range above the 90th percentile for men aged 28. His score on the Intrusive syndrome was in the normal range. His scores on the Anxious / Depressed, Withdrawn, Attention Problems and Aggressive Behavior syndromes were in the borderline clinical range (93rd to 97th percentile). His scores on the Somatic Complaints, Thought Problems and Rule-Breaking Behavior syndromes were in the clinical range above the 97th percentile. These results indicate that Dale Xylophone reported more problems than are typically reported for men aged 28, particularly problems of Anxious / Depressed, Withdrawn, Somatic Complaints, Thought Problems, Attention Problems, Aggressive Behavior and Rule-Breaking Behavior nature. Jose's scores on the Critical Items are listed in the box below. The sum of Jose's scores on the Critical Items was in the clinical range above the 97th percentile.

On the ABCL/18-59 - DSM-Oriented Scales, Jose's scores on the Anxiety Problems and AD/H Problems scales were in the normal range. Jose's scores on the Depressive Problems, Somatic Problems and Antisocial Personality scales were in the clinical range above the 97th percentile. These results indicate that the DSM should be consulted to determine whether Jose meets diagnostic criteria for Depressive Problems, Somatic Problems and Antisocial Personality. Jose's score on the Avoidant Personality Problems scale was in the borderline clinical range (93rd to 97th percentile). Jose's score in the borderline clinical range suggests that the DSM should be consulted to determine whether Jose might meet diagnostic criteria for disorders characterized by problems included on that scale. On the Attention Deficit/Hyperactivity subscales, Jose's scores on all rated scales were in the normal range.

Critical Items

In addition to the scale scores, it is important to consider scores on individual problem items. Because they may raise particular challenges for management, it is especially important to note the problems listed below that were reported with scores of 1 or 2. Look at comments made by the informant on the form in relation to these problems to obtain more information about risks associated with the problems and the contexts in which the problems occur.

<u>Score</u>	<u>Problem Item</u>	<u>Score</u>	<u>Problem Item</u>	<u>Score</u>	<u>Problem Item</u>
1	6.UsesDrugs	1	21.DestroyOther	1	90.GetsDrunk
